

Positive Attendance Devices

PASS™ & PASS+™ devices provide a simple way to let schools know “**who, when & where**” your students are in your building or on your campus.

Positive Attendance accounts for a student’s presence as they check into a building, activity or class. PASS™ and PASS+™ devices (*Patent Pending*) were developed by School Technology Associates specifically for Skyward customers. Within seconds PASS™ and PASS+™ devices can record a student’s presence by simply having the student enter their ID number on the keypad or with the optional barcode scanner. Our device can scan a barcoded student credential or a student specific barcoded ID on a smartphone or tablet.

What’s the difference between PASS™ and PASS+™ devices?

PASS™ devices need to be connected to a computer (most commonly the teachers’ laptop) running Skywards Educator Access+ (EA+).

PASS+™ devices are **directly** connected through your network to Skyward. We offer either wireless or Ethernet powered by a power supply. Another popular option is Ethernet powered by Power over Ethernet (PoE).

Within seconds of the bell ringing our solution enables administrators to search a custom built roster within your Skyward software. You can track students for attendance purposes, where they are going (*or not going*) for academic help, participation in activities and provide you with their specific location in the event of an emergency. PASS™ and PASS+™ empowers students to be responsible and take control of their education. It also eliminates time educators spend on manually taking attendance which gives them more time to teach!

Current PASS™ and PASS+™ uses include:

- Simultaneously recording where the entire student population is during a specific class period.
- Response To Intervention (RTI) data collection to show where students are going for specific help that they need.
- Study Hall and Resource Room visits throughout the school day.
- Weight Room visits and Band Room practice sessions.
- Building attendance at an Alternative High School. PASS™ or PASS+™ devices record students as they enter the school. Once identified our solution provides an arrival “time stamp” within Skyward. PASS or PASS+ can also be used to record when a student leaves the building.

PASS™ and PASS+™ Benefits:

- Provides schools with a real-time snapshot of **Who** is actually **Where** and **When**. Not where they were scheduled to be! Often students are legitimately not where they are scheduled to be and this allows you to locate exactly where they are.
- Helps with security, academic planning, intervention, discipline and time tracking of services provided by the district.
- Fast & easy for students to use.
- Allows students to be more responsible for their education and get the help they need, when they need it.
- Eliminates teachers spending valuable time taking attendance and allows them more time to teach and help their students!

PASS™ and PASS+™ devices starting at \$195 with display, cable and keypad.

Skyward Positive Attendance Improves Student Tracking

New attendance method empowers students and improves accountability on student whereabouts

STEVENS POINT, Wis. (Oct. 28, 2014) – [Skyward](#), an industry leading K-12 school administrative software provider, has added a Positive Attendance solution that provides a new method of taking and tracking attendance that shows if a student is present, not absent during the school day. Giving students the flexibility and freedom they need to meet their individual learning needs, Positive Attendance enables schools to locate, track and moderate students within the building, offering a real-time picture of a student movements on a school's campus.

Positive Attendance accounts for a student's presence as they check into a classroom or designated school location via multiple access portals including entering a PIN on a keypad to a certified PASST[™] device that scans ID cards or a code on a smartphone developed by [School Technology Associates, Inc.](#) Positive Attendance empowers students to take control of their attendance and eliminates time educators spend on manually tracking student whereabouts and steps to verify students made it to the appropriate location.

The new tool is primarily used for enrichment periods where students have access to a wide variety of academic resources, such as the library, study groups or a teacher's classroom. Positive Attendance can also be used for large classrooms where attendance takes a long time, school dances and after-school coordination. The method shows educators and parents what classroom the student was scheduled to report to, as well as the location the student checked into, which can be extremely important in emergency situations.

Wisconsin-based Sauk Prairie High School, with more than 800 students, was the first school to implement Positive Attendance during the 2012-2013 school year. The high school sees the most benefit in the tool's integration with data Skyward already has in place, along with the school-wide study hall period, which gives students the freedom and flexibility to seek additional help from teachers if needed.

"Positive Attendance improves the functionality of our student information system to better meet the needs of students," said Shane Been, assistant principal at Sauk Prairie High School. "More than a static tool used by teachers, Positive Attendance gives students the freedom to be active during the day."

Nicolet High School, also located in Wisconsin, implemented Positive Attendance to provide its more than 1,100 students the flexibility to choose where to go for additional help on a daily basis. Positive Attendance greatly simplified the process and improved accountability and accuracy of attendance for Nicolet High School, along with giving teachers the entire resource period to work with students instead of writing hall passes.

"Teachers like that students can be responsible for signing themselves in and checking to make sure they are marked present," said John Reiels, director of technology at Nicolet High School. "Teachers, counselors and administrators benefit from being able to view an individual student's attendance to see what choices they are making during resource period in case students are not seeking help in classes where they need it."
